

Education

George Mason University, School of Systems Biology

Fairfax, VA

PhD in Bioinformatics & Computational Biology

Aug 2014 – May 2021

Dissertation: Molecular Clock Analysis of Human Adenovirus

Chair: Dr. Donald Seto; Co-Chairs: Dr. Patrick Gillevet & Dr. Sterling Thomas

Johns Hopkins University, Zanvyl Krieger School of Arts & Sciences

Baltimore, MD

MS in Bioinformatics

Nov 2009 – Dec 2011

Capstone: Parallel Algorithm for *de novo* Co-Expression Networks from Microarray Data

Adviser: Dr. Thomas Koval; Supervisors: Dr. Sterling Thomas & Dr. Catherine E. Campbell

Boston University, College of Arts & Sciences

Boston, MA

BA in Biochemistry & Molecular Biology, Minor in Computer Science

Sep 2005 – May 2009

Project: Microsatellite junction counts are inversely proportional to unit size, gap, and edit distance

Adviser: Dr. Gary Benson

Project: Type-II superconductor simulator for magnetic vortex formation

Adviser: Dr. George Ogurek Zimmerman

Skills

Biology	alignment, annotation, homology modeling, microarrays, omics, sequencing, PCR/LAMP, phylogenetics
Computing	data structures, GPU, HPC, microcontrollers, multithreading, numerical methods, parallel, UI
Programming	AWK, BASH, C, C++, C#, CUDA, GLSL, HTML, Java, JavaScript, jq, JSON, perl, python, XML
Mathematics	calculus, geometry, linear algebra, MCMC, ML, signed-distance functions, statistics
Reproducibility	Conda, Docker, Git, L ^A T _E X, pip, R Markdown, Snakemake, Spack, Zotero
Database	BLAST+, ER modeling, PostgreSQL, SQL, SQLite
Language	Spanish (co-native), Japanese (JLPT 5)

Experience

Noblis, Inc.

Reston, VA

Scientist

Oct 2011 – Present

Develop algorithms and program applications for the design and evaluation of molecular diagnostics such as PCR/LAMP assays and multiplexed antigen tests for biosurveillance with refinements based on BSL-II experimentation. Analyze laboratory data for microbial based food and fuel production. Consult on interdisciplinary client work across corporate mission areas, internal R&D, and grant/proposal/patent submissions. Integrate advanced algorithms, machine learning, and statistics into reproducible and portable scientific workflows to generate publication quality reports. Design and supervise internship projects.

Recent and ongoing research projects include a phone app to interpret colorimetric LAMP assay and lateral flow immunoassay results using OpenCV, 3D-printed robot arm with computer vision for wet lab task automation (as PI), DNA-storage algorithm development (with patent submitted and experiment sent to the International Space Station via NASA's SpaceX 33rd Commercial Resupply Service), and AI-directed protein design with RFDiffusion, ProteinMPNN, AlphaFold, and laboratory validation.

As a cross-disciplinary scientist, past projects included microarray analysis, full-stack laboratory information management system (LIMS) development, expert system for well water remediation, stock trade automation, traffic congestion prediction, dark web social network analysis, statistical fingerprinting of nuclear fuel rods, forensic reverse-engineering of file formats, containerized computer virus scanning microservice frameworks (as PI), and efficient language detection on low-energy hardware.

On-Call Technical Intern

Aug 2011 – Oct 2011

Port algorithms to run on the CRAY XMT 2 supercomputer using the C programming language and compiler directives. Analyze *P. aeruginosa* microarray data to identify virulence factors. Also analyzed protein microarray data of hemorrhagic fever viruses from the BSL-III laboratory data from GMU.

Noblis/JHU Independent Research Project Fellowship	Jun 2011 – Aug 2011
Upgrade an algorithm for the analysis of host-pathogen interaction networks from microarray data. Develop an MPI-enabled version for parallel execution. Analyze human-plague (<i>Y. pestis</i>) microarray data to identify network motifs.	
Infant & Toddler Connection of Fairfax-Falls Church	Fairfax, VA
<i>Administrative Assistant II / Data Analyst</i>	Sep 2009 – Jun 2011
Develop VBA macros for use with Microsoft Office applications. Automate administrative tasks using Windows batch scripts. Manage IT support at the Falls Church satellite site.	
Boston University	Boston, MA
<i>Laboratory for Biocomputing and Informatics</i>	Sep 2008 – May 2009
Conduct research under the supervision of Dr. Gary Benson. Implement algorithms in Java and python using distance scoring, sequence alignment, and spaced-seed searching to analyze microsatellite junctions and tandem repeat evolution.	
<i>Experimental Condensed Matter Physics</i>	Sep 2008 – May 2009
Conduct research under the supervision of Dr. George Ogurek Zimmerman. Program a type-II superconductor simulator to visualize phenomena related to magnetic field vortices in Java and python. Collaborate on the 2D implementation of the simulator and subsequently developed the 3D version.	

Licenses & Certifications

Nvidia Corporation	Online
<i>Fundamentals of Accelerated Computing with Modern CUDA C++</i>	Aug 2025
For demonstrating competence in the completion of "Fundamentals of Accelerated Computing with Modern CUDA C++" (Certification ID: dnp-qkQNTBCykgtHv703Tw).	

Awards

Noblis, Inc.	Reston, VA
<i>Noblis Award for Excellence in Science and Technology</i>	2023
For outstanding thought leadership and scientific contributions that advance and solve complex challenges on missions ranging from biodefense to cyber defense.	
<i>Board of Trustees' Award for Excellence</i>	2021
For contributions to the Northern Virginia Innovation Exchange (NVIX).	
<i>Noblis Hackathon Honorable Mention</i>	2017
Participated as part of team "Ghost in the Shell Script" in the 24-hr hackathon to improve the search algorithm of the RASMAS medical recall system. The Java solution employed an n-gram indexing strategy for calculating Jaccard similarity.	

Projects

Homebrewing	
<i>Makgeolli</i>	Jan 2023 - Present
Brew traditional Korean rice wine. Developed an Arduino fermentation monitoring system combining an optoisolator and digital scale to track airlock bubble evolution and mass change over time and write logs to an SD card. Received funds from the Noblis Sponsored Research program to sequence samples and develop LAMP assays for microbes critical to the multiple parallel fermentation process. Results were presented as a talk at ASM 2024 in Atlanta, GA.	
Capsid Modeling	
<i>Render viral capsids using Caspar-Klug Theory</i>	May 2020 – Present
In the browser with JavaScript to export SVG diagrams (democapsid @ https://dnanto.github.io/democapsid/app.html).	
On the GPU with GLSL for realtime renders (protocapsid @ https://www.shadertoy.com/view/dlsGRH).	

District Broomball Statistics*Database and website for league statistics*

Jun 2019 – Present

Design ER model, SQLite database, and R code with novel assist network visualizations for league statistics and website generation (<https://github.com/dnanto/broomball>).
